Logging In to KLER

The screenshot shows a dialog box titled "Kler Login" with a close button (X) in the top right corner. It contains four text input fields labeled "Database:", "Server Name:", "User Name:", and "Password:". Below the fields are two buttons: "Log In" and "Cancel".

When you first open KLER, you will see a window like the one above. Start by entering your assigned database name. When you tab to the Server Name field, it will auto-populate the address of the KLER server. You will then enter your User Name and, typically, on the first login the password will be blank and you'll be prompted to enter your new password on the following screen (image below). Once your password is created, the program will launch.

The screenshot shows a dialog box titled "Change password on first logon" with standard window controls (minimize, maximize, close) in the top right corner. It features a yellow warning triangle icon and a message: "For security reasons, you must now set your own password. Please enter your new password in the two text fields below, and be sure not to reuse a password you used before." Below the message are two text input fields labeled "New Password:" and "Confirm Password:". At the bottom are two buttons: "OK" and "Cancel".
